## Daily Pulses Report 25<sup>th</sup> September 2024

#### **News Highlights**

- According to the Indian Meteorological Department (IMD), the country received 886.9 mm of rainfall from June 1
  to September 24, while the normal rainfall during this period is 843.2 mm. Therefore, the rainfall during this period
  was 5% higher than normal.
- The South Peninsula and Central Indian to pulse producing states Karnataka, Andhra Pradesh, Telangana, Tamil Nadu, East Rajasthan and MP is currently running 15% and 16% above LPA.
- However, eastern and north-east India have seen deficient rains 17% below the LPA impact pulse and other crops' acreage, particularly in the areas of Bihar and Gangetic West Bengal.
- The monsoon withdrawal line is now passing through Anupgarh, Bikaner, Jodhpur, Bhuj and Dwarka. Over the next 24 hours, more areas in west Rajasthan, Punjab, Haryana and Gujarat are likely to see the monsoon retreat.
- The area sown to pulses has increased to 12.858 million hectares as of September 23 this season, compared to 11.928 million hectares during the same period last year, according to the Agriculture Ministry.
- The area sown to 'tur' and 'moong' has increased to 46.50 lakh hectares and 35.46 lakh hectares, respectively, while the area under urad has slightly decreased to 3.073 million hectares so far in the current season.
- Due to weak buying by dal mills, the prices of Tur (pigeon pea), Chana (chickpea), and Urad (black gram), as well as Moong (green gram), have declined in the domestic market, while the price of Masoor (lentil) remained stable during this period.
- The price of imported Urad (black gram) in Chennai weakened, with weak buying from dal mills in the domestic market as well. This has led to a decline in its price. After the Shradh period, the arrival of new Urad crops will increase in all producing states, and the moisture content in the produce will also reduce. The arrival of new Urad has already begun to increase in Maharashtra and Karnataka, while Madhya Pradesh and Rajasthan have also started receiving new crops.
- Due to limited demand from dal mills, the prices of Tur (pigeon pea) have shown a downward trend, although prices in Chennai remained stable for the dollar variety. According to traders, the central government is continuously reviewing Tur prices, which is why dal mills are purchasing Tur only as per their immediate needs at the higher rates. The continuous import of lemon Tur from Burma is also putting pressure on the prices.
- Chana prices declined due to weak demand for chana dal, but a significant drop is not expected. Stockists are limiting their sales at current prices, and with the consumption season underway, demand for chana dal and besan (gram flour) is likely to remain stable. In Queensland, Australia, the new chana crop has started to arrive in small quantities, though Australian chana isn't expected to reach the domestic market before November.
- In Delhi, moong prices remained stable, but in Jaipur, they continued to weaken for the second consecutive day. The arrival of new moong crops is increasing in the markets of producing states, and if the weather remains favorable, the pressure of new crop arrivals will intensify in October. During the current Kharif season, the total sowing of moong has increased by 12.68% compared to last year, and so far, the weather has generally remained favorable for the crop in most areas.
