17	Soybean	West Africa	Mumbai	Dec	570	570	0

## Daily Pulses Report 27<sup>th</sup> November 2024

### News Highlights

- A Deep Depression over the Southwest Bay of Bengal is moving north-northwest and is likely to intensify into a cyclonic storm within 12 hours. It is expected to approach the Tamil Nadu coast while skirting Sri Lanka over the next two days, IMD said.
- Retail prices of Tur and Urad have either declined or remained stable over the past three months, following a drop in mandi prices, according to the Ministry of Consumer Affairs, Food, and Public Distribution. The Department of Consumer Affairs regularly engages with the Retailers' Association of India (RAI) and organized retail chains to monitor price trends and ensure that retail margins remain reasonable.
- Due to weak purchasing activity by dal mills, the domestic market witnessed a decline in the prices of tur and moong, while the prices of chana rose for the second consecutive day. The prices of both domestic and imported masoor remained stable.
- Limited demand from dal mills led to mixed trends in urad prices, with FAQ and SQ weakening in Chennai. Increased arrivals of desi urad and the upcoming new crop have pressured prices, prompting millers to buy only as needed.
- Weak demand from dal mills led to a further decline in Tur prices for the second day. In Chennai, Lemon tur prices dropped in dollar terms. Traders attribute this to subdued mill demand and millers focusing on the upcoming new crop next month. Purchases are being made only as needed, with higher per-hectare yields expected this season in Maharashtra and Karnataka.
- Chana prices up by ₹50 due to purchases by dal mills. Traders expect mill demand to continue as good-quality chana remains scarce in major producing mandis. With the consumption season underway, demand for chana dal and besan is likely to stay strong. Millers have limited leftover stock, and the new crop is still months away. Additionally, chana sowing in Karnataka is lagging compared to last year's rabi season.
- As of November 25, 2024, Rajasthan has recorded rabi pulses sowing on 1.89 million hectares for the 2024-25 season. Among the key crops, Chana (gram) has been sown on 1.85 million hectares, reflecting a 13% increase compared to the previous year.
- In Delhi, prices of both domestic and imported masoor remained stable. Traders note that demand for masoor dal from major states like Bihar, Bengal, and Assam will continue during the consumption season, prompting mills to purchase. Daily arrivals in mandis of Madhya Pradesh and Uttar Pradesh remain limited, and stockists are unwilling to sell at lower prices. As a result, a significant drop in masoor prices is unlikely.
- In Delhi, moong prices rose by ₹100, though Chamki Moong prices weakened in Akola, while remaining stable in other producing mandis. Traders attribute this to increased arrivals of new moong in producing states. Sowing during the current kharif season has been higher than last year, leading to expectations of increased production.
- As of November 27, 2024, under the Kharif season 2024 procurement scheme (PSS), NAFED has procured a total of 24,043 MT of moong in Karnataka.
