Daily Pulses Report 20th November 2025

News Highlights

- The IMD has issued an alert for the Andaman & Nicobar Islands as a cyclonic circulation over the Bay of Bengal is expected to intensify from November 21, bringing heavy rainfall, thunderstorms and rough sea conditions. Authorities have issued Cautionary Signal-3 at Port Blair and may reschedule inter-island vessel operations for safety.
- Rajasthan's rabi pulses sowing for the 2025–26 season shows a strong start, with total coverage rising 12.74% to 2.01 million ha compared to last year. Chana acreage increased by 13.39% to 1.99 million ha, exceeding both last year's level and nearing the state's target. However, sowing of other pulses declined by 25.39%. Overall, the state is progressing well toward achieving its rabi pulses target for the season.
- Yellow pea imports declined sharply by 66% to 3,42,082 MT in April–September 2025, compared with 10,16,191 MT last year. In contrast, Urad imports saw a marginal rise of 0.81% to 3,99,612 MT from 3,96,391 MT a year ago. Meanwhile, Tur imports dropped 28% to 3,97,264 MT during April–September 2025, down from 5,53,695 MT in the same period last year.
- Odisha's Chief Minister has urged farmers to diversify into pulses and oilseeds to boost their income. The state government is promoting crop diversification through subsidies, tax relief, and support measures to help farmers adopt new crops and modern agricultural practices.
- The government has begun internal discussions on whether to extend the Urad import MoU with Myanmar beyond the current financial year. The review comes amid concerns over a possible decline in India's urad production, while Myanmar is projecting a record crop and has been urging India to continue the agreement since February.
- Moong prices remain stable in producing mandis. Traders said that arrivals are likely to continue due to favourable weather, and the Centre has approved MSP procurement of moong from Rajasthan. Although sowing was slightly lower than last year, the government is actively releasing stocks from the central pool. Experts believe overall moong production this season will be higher, so a sharp price rise is unlikely in the near term.
- Global Weather: Decent rainfall is forecast across the US Southern Plains, supporting winter crop conditions, while Brazil is expected to see increasingly wet weather, with significant precipitation likely over Mato Grosso during the next week.
- China imported no U.S. soybeans in October for the second straight month, even as its total soybean imports hit a record 9.48 million MT, driven by heavy purchases from South America. Shipments from Brazil rose 29% to 7.12 million MT (75% of total imports), while Argentina supplied 1.57 million MT, up 15% year-on-year.
