Daily Pulses Report
05th December 2025

News Highlights

- *India is set for a mixed spell of winter weather from December 5 to 10, with cold wave conditions, dense fog, and isolated rainfall in parts of the north, east, and south. Higher-altitude regions may see intermittent precipitation, while southern states like Kerala and Tamil Nadu could experience rainfall from the tail-end of the northeast monsoon. Light to moderate showers are also expected in island territories, causing mild but widespread weather activity.*
- *The vessel M.V. PORTAITISSA, carrying a total of 73,321 MT of pulses from Canada—including 36,781 MT of Masoor (Lentils) and 36,540 MT of Matar (Yellow Pea)—is scheduled to arrive at Mundra Port on December 14, 2025, according to shipping reports.*
- *Rajasthan's rabi pulses sowing for the 2025–26 season has increased significantly compared to last year. Chana acreage rose sharply by nearly 30%, while sowing of other pulses declined by about 21%, resulting in an overall increase of 28.8% in total rabi pulses area.*
- *The central government is planning to start tur procurement under the price support scheme as early as January to build buffer stocks amid low market prices. Preparations are underway with central agencies set to buy directly from markets to speed up operations, though final quantity sanctions from major tur-producing states are still awaited. With timely procurement and improved coordination, government officials expect significantly higher purchases than last year.*
- *Canada's revised 2025 estimates show lentil production reaching 3.36 million MT, up 38% from last year. Pea output is expected at 3.93 million MT, a 31% increase, while chickpeas are forecast at 0.48 million MT, up 68%. Dry beans are projected at 0.99 million MT, up 34%, and coloured beans at 0.35 million MT, slightly down 1.6%.*
- *FAO has raised its world cereal production forecast for 2025 to 3,003 million MT, surpassing the 3-billion-MT mark for the first time, led by stronger wheat prospects in Argentina, the EU, and the US. Rice output is also projected at a record 558.8 million MT, driven by gains in Asia. Global cereal stocks are set to reach 925.5 million MT by the end of 2026, while world cereal trade in 2025-26 is expected to rise to 500.6 million MT, supported by improved wheat and coarse grain shipments.*
