Daily Pulses Report 09th January 2026

News Highlights

- *Severe cold wave and dense to very dense fog are set to disrupt life across north India on January 9, with near-zero visibility and temperatures well below normal in Punjab, Haryana, Delhi, Rajasthan and Uttar Pradesh. In contrast, a deep depression over the Bay of Bengal is likely to bring heavy to very heavy rainfall to coastal Tamil Nadu, Puducherry and Karaikal, raising flood concerns.*
- *The vessel MV TAZ, carrying 34,270 MT of desi chickpeas (chana) from Australia, is scheduled to arrive at Mundra Port on January 19, 2026, according to shipping agency reports.*
- *Mandi wholesale prices of key pulses are currently ruling below their MSP levels across India. As on 2 January 2026, tur prices are about 14.5% below MSP, moong 15.1%, urad 18.7%, and gram around 2.3% lower than the support price, indicating weak market sentiment and pressure on farmers' realisations despite MSP benchmarks.*
- *NCCF and Nafed have started direct procurement of pulses from pre-registered farmers at APMC mandis at the minimum support price (MSP). The move aims to provide better price realisation for tur, urad, masoor and chana, encourage higher pulse production, and reduce India's dependence on imports.*
- *Today, arrivals were weak in most Karnataka mandis due to lower prices, as farmers are reluctant to sell tur at current levels. Owing to weak prices, farmers are storing tur stocks in warehouses or holding them for the next auction. In the Muddebihal market, out of 8,752 packets, farmers sold only 500–1,000 packets, with the balance held back for the next tender. Meanwhile, new chana arrivals have started in Gadag, where prices are ruling around ₹6,101 per quintal.*
- *Canada's field pea exports remain weak, while lentil exports continue to stay firm in the current marketing year. Field pea shipments fell 42% month-on-month in October to 0.279 million MT from 0.481 million MT, with cumulative exports at 0.851 million MT, down from 1.066 million MT last year, mainly to Bangladesh, China and India. In contrast, lentil exports rose 9% in October to 0.291 million MT from 0.266 million MT, lifting total shipments to 0.592 million MT, slightly above 0.564 million MT last year, supported by demand from India, Turkey and Egypt.*
- *Despite a record pulse harvest in 2025-26, Russian producers are facing worsening market conditions as ample global supplies from Canada, Australia, India and the Black Sea region have pushed prices lower. Intense export competition, coupled with logistical and financial constraints, has limited overseas sales, forcing more volumes into a weak domestic market. Analysts warn that volume-led growth without demand alignment risks turning record output into margin pressure for growers.*
