## Daily Pulses Report 02<sup>nd</sup> February 2026

### News Highlights

- *The IMD has forecast moderate rainfall in Western Ghats districts due to multiple low-pressure systems over the Arabian Sea and Comorin Sea, influencing weather across southern India. Fog is also likely in several interior districts during early mornings, while Chennai is expected to see partly cloudy skies and stable conditions, with authorities closely monitoring developments and advising caution in affected areas.*
- *Urad prices are expected to remain firm in the near term on low arrivals and supportive global cues, though fresh Myanmar supplies and rising arrivals from southern states could cap further upside and trigger mild corrections at higher levels. Prices continued to rise for the third consecutive week ending 31 January 2026, driven by strong mill demand, firm Myanmar cues, a weaker rupee, higher international offers, and tight domestic supplies despite some profit booking.*
- *Tur prices are likely to remain firm on strong mill demand and tight domestic and global supplies, though fresh arrivals from Myanmar, improved availability and cheaper substitutes may limit further upside. Prices rose for the third consecutive week ended 31 January 2026, supported by MSP-backed procurement, lower crop estimates in key regions, a weaker rupee and steady mill buying, while slow arrivals from Vidarbha continue to constrain near-term supply.*
- *Chana prices are expected to remain firm on strong mill and trader buying amid festive demand, though gradual new-crop arrivals and comfortable import stocks may cap further upside. Prices rose in the week ended 31 January 2026, supported by lower old-crop arrivals, steady demand from South India, firm chana dal and yellow pea prices, and crop concerns following unseasonal weather in key producing states.*
- *Global weather -Cold risk is intensifying across the Black Sea region, with Ukraine especially vulnerable due to limited snow cover and forecasts of temperatures plunging to minus 30°C. Meanwhile, harsh winter conditions continue to disrupt Russian logistics.*
- *South Australia's grain production for the 2025–26 season is estimated at 8.9 million MT, near the five-year average, despite drought challenges, according to PIRSA. Cooler spring weather and late rainfall supported yields, with canola performing well, while mixed grain quality, delayed harvests, and variable pulse outcomes reflected uneven seasonal conditions.*
