Daily Pulses Report 13th February 2026

News Highlights

- *The IMD has forecast the formation of a low-pressure area over the southeast Bay of Bengal, which may bring light to moderate rainfall to parts of South India next week, though no storm development is expected. Meanwhile, western disturbances are likely to cause isolated rain and snowfall in the western Himalayan region and scattered showers across parts of North India.*
- *Weak demand from dal mills led to a decline in domestic prices of tur, urad, and chana, while masoor traded in a mixed trend. Moong prices remained steady to slightly weak during the period.*
- *Imported urad prices in Chennai have weakened amid subdued demand from dal mills, putting pressure on overall market sentiment. While domestic varieties remain steady to firm, reduced selling by importers at lower levels may lend limited support. However, significant upside appears unlikely due to continued weak mill demand.*
- *Madhya Pradesh line moong prices eased in Delhi, while most other producing mandis reported stable rates. With steady releases from the central pool, any significant price upside appears unlikely at present.*
- *Bumper production of Chana in Karnataka has increased supply pressure, leading to weakness in chana prices despite lower carryover stocks. The availability of cheaper Karnataka chana has also reduced demand for Australian supplies. Market sentiment is likely to improve only if the government undertakes substantial procurement. At present, maintaining limited stock exposure and adopting a rolling trade strategy appears advisable.*
- *After the mid-January trade agreement, improved Canada–China relations and tariff relief have revived Chinese demand for Canadian pulses. As reported by Rayglen Commodities, lentil prices remain largely stable, with stronger demand for large green and red lentils, while small greens face supply pressure. Pea markets saw initial gains on China’s return but have since steadied, with ample stocks likely to limit major upside.*
- *Global edible oil markets displayed a mixed trend. Malaysian palm oil prices recovered during the evening session, while Chicago soyoil futures ended lower. According to trade sources, Bursa Malaysia Derivatives (BMD) crude palm oil futures showed mixed movement on Friday, with a mild rebound from lower levels in the latter half of the session. The recovery was largely attributed to bargain buying and short covering at lower price levels.*
