## Daily Pulses Report 06<sup>th</sup> March 2026

### News Highlights

- According to the India Meteorological Department, maximum temperatures across northwest India are likely to stay 4–6°C above normal, while central India may see 3–5°C above normal this week. Some areas have already recorded 37–40°C, with Jharsuguda (Odisha) at 39.6°C, while a western disturbance may bring rain or snowfall to the western Himalayas and thunderstorms in eastern India.
- According to the Maharashtra Economic Survey, pulses and oilseed production in Kharif 2025-26 is expected to decline by 28.2% and 47.4%, respectively, due to unseasonal rainfall. However, in the Rabi season, pulses output is projected to rise 29.7%, while oilseed production may decline by 16.2%.
- Canada's 2026 pulse outlook shows mixed trends, with dry pea production rising to about 3.49 million MT, while lentil output may decline to around 2.21 million MT due to lower yields. Chickpea production is projected near 0.44 million MT, showing a modest increase from last year.
- Chickpea exports from Australia fell sharply to 91,511 MT in January from 594,201 MT in December, according to the Australian Bureau of Statistics. Bangladesh remained the largest buyer, while shipping disruptions in the Middle East and weaker demand in some European markets impacted exports.
- Lentil exports from Australia declined 5% to 3,00,009 MT in January, according to the Australian Bureau of Statistics. India remained the top buyer, while Middle East shipping disruptions may impact exports to markets like the UAE and Bahrain.
- Global Weather: Strong moisture flow from the Gulf is bringing widespread rain, fog and severe storm risks across the central United States, with heavy rainfall already impacting the Ohio Valley and more storm activity expected in Oklahoma, Kansas and Missouri. Some rainfall is also reaching parts of Argentina's row crop belt, but outside the eastern U.S. and limited areas of Argentina, global rainfall across key agricultural regions remains largely scarce.
- Edible oil prices in the global market strengthened during the evening session. Malaysian palm oil prices recorded a sharp rise, while soybean oil prices on the Chicago market also moved higher. Traders said that palm oil futures on the Bursa Malaysia Derivatives Exchange (BMD) gained as most of the energy complex strengthened and prices of other edible oils also increased.
