Daily Pulses Report 09th April 2026

News Highlights

- *The India Meteorological Department has issued an orange alert for thunderstorms with hail over Assam and Meghalaya, along with widespread thunderstorms, lightning, and gusty winds across several northern, eastern, and northeastern regions. Meanwhile, hot and humid conditions are expected to persist over coastal and southern states for the next two days.*
- *The pulses market showed a mixed trend across key mandis. Tur prices declined in Solapur while remaining stable elsewhere, and chana gained in Raipur and Bikaner. Urad and masoor prices weakened in major centres, whereas moong remained steady. Kabuli chana recorded a notable rise in Indore, while yellow pea showed slight softness.*
- *The central pool currently holds around 2.2 million MT of pulses, against the required buffer stock of 3.5 million MT. Of the total, moong accounts for 0.78 million MT, followed by tur (0.55 million MT), masoor (0.40 million MT), and chana (around 0.30 million MT). Urad stocks remain very low due to weak procurement in the previous season.*
- *Delhi chana prices remain stable, with relatively weaker demand in chana dal compared to the previous session. Selling pressure is limited at lower levels, while active buying by stockists in Rajasthan is supporting the market and preventing any decline in Delhi. However, once stock positions are built, some correction may emerge, with prices expected to trade in the ₹5,450–5,850 range.*
- *Global edible oil prices moved higher. Malaysian palm oil prices rose by over 1% in the evening session, while Chicago soybean oil also strengthened. Traders said that Malaysian palm oil futures recovered on Thursday, supported by short covering and firm energy prices, closing higher.*
- *Despite the ceasefire between the United States and Iran, tensions persist around the Strait of Hormuz, with shipping still constrained and tankers awaiting clearance. Ongoing security risks and unclear implementation of the agreement are delaying normal operations. As a result, crude oil prices have rebounded, reflecting continued market sensitivity to geopolitical uncertainty.*
