Daily Pulses Report 10th June 2026

News Highlights

- *The India Meteorological Department (IMD) has forecast heavy rainfall across Kerala until June 14 following the onset of the southwest monsoon. Fishermen have been advised not to venture into the sea along the Kerala, Karnataka, and Lakshadweep coasts due to strong winds of 40–60 kmph and rough weather conditions expected over the next few days.*
- *The Government of India has approved record procurement of pulses and oilseeds under the Price Support Scheme (PSS) for the Rabi 2025-26 season in Haryana, Uttar Pradesh, and Karnataka. The procurement, valued at over ₹11,698 crore, will cover key crops such as gram, masoor, mustard, and safflower, ensuring MSP support to farmers, preventing distress sales, and strengthening the country's food and nutritional security.*
- *Gujarat's Kharif pulses sowing has gained momentum with total acreage crossing 0.163 million hectares as of 8 June 2026. Tur remains the dominant crop, accounting for over 70% of total pulses area, while strong growth in moong and urad acreage reflects favorable monsoon progress and improved farmer interest in pulse cultivation.*
- *Canada's pulse exports showed mixed trends in April, with field pea shipments rising 11% month-on-month to 0.379 million MT, while lentil exports declined 15% to 0.215 million MT. Despite the monthly slowdown in lentils, cumulative exports remain above last year's levels, with field pea exports reaching 2.232 million MT and lentil exports 1.844 million MT. China remained the largest buyer of Canadian peas, while Turkey and India were the leading importers of lentils.*
- *Global edible oil prices showed a mixed trend during the week. Malaysian palm oil prices posted a slight recovery, while Chicago soybean oil futures weakened. Traders said Malaysian crude palm oil futures on the Bursa Malaysia Derivatives Exchange ended marginally higher on Wednesday. However, sentiment remained capped by bearish MPOB May data, which showed a larger-than-expected increase in palm oil inventories and a decline in exports.*
- *The United States is considering a new tariff regime on Indonesian imports, which could raise total duties on some products to as much as 18% following ongoing trade investigations. In response, Indonesia is seeking tariff exemptions for key plantation commodities, including crude palm oil, rubber, and coffee. As the dominant supplier of palm oil to the U.S., accounting for nearly 89% of imports, Indonesia is aiming to protect exports, with annual palm oil shipments to the U.S. estimated at around 2 million MT.*
