Daily Pulses Report
19th August 2026

News Highlights

- *IMD has forecast heavy to very heavy rainfall across parts of eastern and central India, with isolated extremely heavy rain over Jharkhand. The depression over Jharkhand and adjoining Gangetic West Bengal is driving the intense rainfall, with further rain expected across Jharkhand, Bihar and central India.*
- *Today's Market: The market remained mixed, with Chana, Moong, Matar and some Masoor markets firm, while Urad and Masoor saw selective weakness. Tur was mixed across centres, and Kabuli remained steady.*
- *On 19 Aug 2026, NAFED's PSS Chana sell tender saw the highest bids at ₹6,453/quintal in Akola (Maharashtra), ₹6,401 in Rajkot (Gujarat), ₹6,311 in Vidisha (Madhya Pradesh), and ₹6,201 in Ganganagar (Rajasthan). Under the NAFED Chana Sell Tender, bids were ₹5,659/quintal in Baran (Rajasthan) and ₹5,425/quintal in Chhindwara (Madhya Pradesh).*
- *India's pulses imports surged 58% to 1.3 million MT in Q1 FY27, led by higher yellow pea and masoor inflows amid earlier concerns over domestic crop prospects. However, imports have slowed recently as kharif pulse sowing and crop prospects improved, while the outlook for further imports will depend on monsoon performance and upcoming kharif/rabi yields.*
- *India Tur Imports: India imported around 1.32 million MT of Tur during April–December 2025, with 1.03 million MT arriving during June–December. Mozambique was the largest supplier at 0.41 million MT, followed by Tanzania at 0.27 million MT and Burma at 0.22 million MT.*
- *The global pea market is expected to move toward a more balanced supply-demand situation in 2026-27, with production forecast to fall around 14% to 15.7 million MT after record output in 2025-26. Canada and Russia are likely to see significant production declines, while Ukraine's pea output could reach around 740 KMT, supporting export potential of 450–550 KMT. Strong demand from Italy, Turkey and Malaysia remains supportive, but higher Ukrainian export availability and logistical constraints could increase competition and pressure prices.*
- *Global edible oil prices rose for the second consecutive session, with Malaysian palm oil futures closing higher. The rally was supported by strength in Chinese edible oil markets, gains in Chicago soybean oil and a rise in crude oil prices, which improved overall sentiment across the vegetable oil complex.*
- *Global palm and soybean oil prices continued to strengthen, supported by firm Indian demand, tighter Black Sea vegetable oil supplies and higher crude oil prices. Malaysian palm oil futures rose 2.4% to a four-month high, while Chicago soybean oil gained 2.2% on stronger crushing and lower stocks. However, record-high Malaysian palm oil inventories and expectations of larger supplies of sunflower, soybean and rapeseed oils from September could limit further gains.*
