Daily Pulses Report 27th October 2026

News Highlights

- Cyclone Arnab has reportedly intensified into a cyclonic storm, with the Andhra Pradesh coast expected to be affected. The potential impacts include heavy rainfall, thunderstorms and gusty winds, depending on the storm's track and intensity. The IMD also expects the cyclone's wider weather influence to bring rainfall to parts of Delhi-NCR, Uttar Pradesh and Haryana on October 29–30.
- Today's Market: Tur prices were steady in Akola and Solapur but fell ₹50 in Chennai. Chana declined in Delhi and Raipur but rose ₹150 in Bikaner; urad softened in Chennai and Delhi. Moong and masoor gained ₹50 in Delhi, while matar rose ₹25–50 in select markets and Kabuli chana increased ₹100 in Indore.
- India's pulse imports rose 67% year-on-year to 2.06 million MT during April–August 2026, while import value increased 38% to \$1.18 billion. Retail prices of tur, chana and urad rose by 15%, 7.5% and 10%, respectively, amid production concerns and El Niño risks. Despite calls for import duty cuts, the government is likely to maintain current duties, citing buffer stocks of around 4.5 million MT.
- Tamil Nadu has sought the Centre's approval to impose stockholding limits on rice, pulses, edible oils and onions to curb hoarding and control prices. The state cited higher-than-national retail prices and potential crop losses linked to El Niño, with September prices of tur dal at ₹134.23/kg, rice at ₹61.66/kg and palm oil at ₹160.28/litre.
- Heavy rainfall of 100–200 mm across northern New South Wales and southern Queensland has increased the risk of quality downgrades in Australia's chickpea crop due to mould and discolouration. New-crop chickpea prices have risen to around A\$980/MT, up approximately A\$90 since late September, while export demand from Pakistan, India and Bangladesh provides support. Australia's chickpea production is estimated at 1.05 million MT, with around 300,000 MT harvested so far.
- Australian lentil prices have strengthened by around A\$50/MT over the past month, with smaller Nipper-type lentils trading at A\$600/MT delivered port. Harvest is expected to begin soon in South Australia's Mallee region, where bumper yields are anticipated, while recent rainfall in Victoria and South Australia has increased the need for dry weather ahead of harvest.
- Canada's lentil production in MY 2026-27 is forecast to decline 26.6% to 2.47 million MT due to lower acreage and yields. However, high carry-in stocks are expected to limit the decline in total supply, with exports projected at 2.4 million MT. Red lentil supplies from Canada and Australia may pressure prices, while tighter global green lentil availability and Indian demand could provide support.
