Daily Pulses Report 28th October 2026

News Highlights

- According to the India Meteorological Department (IMD), Severe Cyclonic Storm Arnab over coastal Andhra Pradesh brought heavy rainfall and strong winds, with warnings for affected coastal districts. The system's movement and weakening after landfall remain important for assessing further rainfall impacts and potential damage to standing crops.
- An IMD and IITM study found that peninsular India's hot semi-arid climate zone shrank from 30% to 16% between 1951–1980 and 1991–2020, mainly due to rising rainfall. However, this year's El Niño-affected monsoon left southern India 24.3% below normal rainfall, contributing to drought conditions in Karnataka, Andhra Pradesh and Telangana.
- Today's Market: Tur prices declined by ₹100 in Akola and Solapur, while Chennai gained ₹50. Chana fell ₹75 across Delhi, Raipur and Bikaner. Urad declined ₹25 in Chennai SQ and ₹50 in Guntur, while moong was mixed. Masoor rose ₹25–50 across key markets, matar remained unchanged, and Kabuli (Indore 42–44) gained ₹100 per quintal.
- India's pulse imports rose 67% year-on-year to 2.06 million MT during April–August FY 2026-27, while import value increased 38% to \$1.18 billion. Retail prices of tur, chana and urad rose by 15%, 7.5% and 10%, respectively. Masoor imports surged 200% to 0.64 million MT and yellow pea imports increased 114% to 0.62 million MT. Despite concerns over low rainfall and El Niño, the government is unlikely to cut import duties, citing adequate buffer stocks of around 4.5 million MT.
- NCCF PSS Chana Rabi-26 bid approvals dated 27 October 2026 were reported at ₹7,501–7,552/quintal in Maharashtra, ₹7,521 in Telangana, ₹7,746–7,819 in Karnataka, ₹7,425 in Rajasthan, ₹7,311 in Madhya Pradesh and ₹7,452–7,455 in Gujarat. For NCCF PSS Tur Kharif 2025, the approved bid shown for Telangana was ₹9,711/quintal.
- Edible oil prices in the global market declined for the third consecutive day during the evening session. Malaysian palm oil futures closed lower, while soybean oil prices weakened in Chicago. Traders said losses in Chicago soybean oil and Dalian palm olein, along with a stronger ringgit, erased morning gains and offset support from rising crude oil prices.
- The World Bank projects global food commodity prices to rise by around 10% in 2026 and 7% in 2027, driven by higher energy and fertilizer costs, grain shipment disruptions and El Niño-related weather risks. Energy prices are forecast to increase 32% and fertilizer prices 14% in 2026, raising agricultural production costs and increasing global food security concerns.
